

DESIGNER CONCRETE

EXPOSED AGGREGATE

Exposed Aggregate is the name given to concrete which has been treated so that the top layer of cement paste has been removed. The result is the aggregate underneath becomes exposed to create an attractive, low maintenance and non-slip surface for your driveway, patio and paths.

Coloured oxides can be added to further enhance the colours of the aggregate and Firth Paving can also be incorporated to add stylish bands and borders.

EXPOSED AGGREGATE - WAIKATO

Firth Waikato offers six distinct pebble mixes, Waipa, Golden Harvest, Manorfield, Mountain Burst, Fine Aggregate (Half Black) and Fine Aggregate (Full Black) which when exposed add colour and texture to your outdoor areas.

Waipa

Available from: Hamilton, Te Awamutu, Whitianga

Mountain Burst

Available from: Hamilton, Te Awamutu, Whitianga

Golden Harvest

Available from: Hamilton, Te Awamutu, Thames

Fine Aggregate (Half Black)

Available from: Hamilton, Te Awamutu, Thames, Whitianga

Manorfield

Available from: Hamilton, Te Awamutu, Thames, Whitianga

Fine Aggregate (Full Black)

Available from: Hamilton, Te Awamutu, Thames, Whitianga

While every care has been taken to obtain an accurate representation, the colours and textures shown above are subject to the limitations of the printing process and may not be a true representation. The aggregates and oxides used are natural products and hence some variations will occur. Samples are to be used as an indication of colour and texture, not a comparison. Handling, placing, temperature and the actual situation can and will have an effect on the finished look. We recommend inspection of an actual installation prior to purchase. Please keep in mind when you are choosing Designer Concrete that you are dealing with a natural material that can be influenced by a number of factors.

SUSTAINABILITY: THE FIRTH CONCRETE & CONCRETE MASONRY SUSTAINABILITY LIFECYCLE

- Environmentally compliant manufacturing plants
- Surplus water and some aggregates recycled
- Low transport impacts
- Leftover concrete returned from construction sites
- Passive solar heated thermal mass makes completed buildings more energy-efficient

- Most wash water returned from construction sites
- Highly durable, low maintenance buildings and no rot
- High degree of noise control
- Inherent fire resistance
- Overall longer effective building life
- Demolished concrete can be recycled as hard fill or aggregate
